Does dosing of drug for mom make a difference for baby's risk of cleft lip, palate?

Taking a higher dose of topiramate during the first 3 months of pregnancy may increase a baby's risk of cleft lip or cleft palate more than when taking a lower dose. "While topiramate is not recommended for pregnant women, unplanned pregnancies are common, so it is important to fully examine any possible risk," said Sonia Hernandez-Diaz, MD, DrPH, of the Harvard T.H. Chan School of Public Health in Boston.

Hernandez-Diaz S, Huybrechts KF, Desai RJ, et al. 2018;90:e342-e351.
