## **Author Tip**

*Neurology* strives to publish superb studies in clinical neurology. Peer reviewers' opinions of manuscripts are invaluable in assisting the Editor-in-Chief and Associate Editors in making their decisions. In addition to helping assess the value of a manuscript for the scientific literature and *Neurology* in particular, reviewers help authors to improve their manuscripts by recommending areas for the author to address (either for *Neurology* or an alternate journal if a manuscript is ultimately rejected by *Neurology*).

In return for reviewing, you will keep up with the field and gain understanding that will improve the quality of your own studies and how you report them. In appreciation of your service to the journal, your name will be included in a list we publish twice each year of reviewers who have reviewed for us during the last 6 months. Superb reviewers may be chosen to sit on *Neurology*'s Editorial Board. If you are interested in reviewing, contact us at journal@neurology.org and include a series of keywords on topics in which you have expertise to help us determine appropriate papers for you to review.

#### Study: Men with migraine may have higher estrogen levels

While it has been known that estrogen plays a role in migraine for women, new research shows that the female sex hormone may also play a role in migraine for men. "Previous research has found that levels of estrogen can influence when women have migraines and how severe they are, but little is known about whether sex hormones also affect migraine in men," said study author W.P.J. van Oosterhout, MD, of Leiden University Medical Centre in the Netherlands. "Our research found increased levels of estrogen in men with migraine, as well as symptoms of lower levels of testosterone."

van Oosterhout WPJ, Schoonman GG, van Zwet EW, et al. 2018. doi.org/10.1212/WNL.000000000005855
