## Author Tip

An important part of publishing is promoting your work. Using popular sites like Facebook and Twitter is a fast free way to share your work with a wide audience. Use hashtags so your posts can be easily found (e.g., #Neurology or #Parkinsonsdisease). Users following those hashtags will see your posts, when they otherwise might not. Using images tends to draw people in more than plain text. If you are interested in having *Neurology* promote your published paper on our channels, or would like to learn more about using social media, please contact [msorenson@neurology.org](mailto:msorenson@neurology.org).

### It's not just a pain in the head—Facial pain can be a symptom of headaches too

A new study finds that up to 10% of people with headaches also have facial pain. "Facial pain has not been well recognized as a symptom of headache, and some people end up waiting a long time for a proper diagnosis and treatment," said study author Arne May, MD, PhD, of the University of Hamburg in Germany. "This study shows that facial pain is not uncommon, and for many people their pain occurs mainly in the face, not the head. For a better understanding of these types of facial pain and ultimately for the development of treatments, it's crucial that we understand more about facial pain and whether it is the same disease as the headache, but showing up in a different place, or whether they are 2 different syndromes."
