

From the Editor

Brian C. Callaghan, MD, MS, and Kevin A. Kerber, MD, MS

Innovations in Care Delivery strives to highlight articles that feature advances in care delivery in our Editors' Blog, Editors' Top Five Recommended Reading, and Latest Articles sections. Periodically, we also include interviews with leaders in the field of health services research.

Editors' Blog

Over the last several months, the Innovations in Care Delivery blog has discussed articles about outcome measures for premanifest Alzheimer disease trials, amyotrophic lateral sclerosis and variation in noninvasive ventilation, and stroke in ethnic minority-serving US hospitals. Our goal is to highlight health services research articles published in *Neurology*[®] or *Neurology*[®] *Clinical Practice* as well as to give opinions by experts in the field.

Editors' Top Five Recommended Reading and Latest Articles

Check out our collection of *Neurology* articles related to innovations in care delivery.

In a recent article in *Neurology: Clinical Practice*, Terman et al.¹ used the State Inpatient Databases to describe factors associated with 30-day readmission for patients hospitalized for seizures. Another recent article by Robbins et al.² analyzed data of payments from industry to US neurologists and found that 9,505 neurologists (there are about 14,000 neurologists in the US) received at least 1 payment from industry each year with most receiving <\$1,000. Drs. Albert and Kim also contributed an editorial about this paper.³ Finally, don't miss the article by Baskin et al.⁴ about the efforts by the journal to promote perspectives of equity, diversity, and inclusion and address disparities, and the article by Dr. Silver about understanding and addressing gender equity for women in neurology.⁵
