AAN recommends people 65+ be screened yearly for memory problems

To help physicians provide the highest quality patient-centered neurologic care, the American Academy of Neurology (AAN) is recommending physicians measure how frequently they complete annual assessments of people age 65 and older for thinking and memory problems. This metric for yearly cognitive screening tests is part of an AAN quality measurement set. "Since thinking skills are the most sensitive indicator of brain function and they can be tested cost-effectively, this creates an enormous opportunity to improve neurologic care," said author Norman L. Foster, MD, of the University of Utah in Salt Lake City and a Fellow of the American Academy of Neurology.
