About the Resident & Fellow Section

This section, developed for the trainee readership, will keep you up to date on issues related to training and career considerations, as well as support the development of lifelong learning skills. This section is trainee-run; a team of residents and fellows is responsible for writing, reviewing, editing, and publishing articles of interest to trainees. The group is also responsible for initiating and developing other unique projects, such as podcasts, electronic communications, the Resident and Fellow website, and new subsection ideas. Weekly e-Pearls, or email 'pearls' have been sent to residents nationwide since July 2008. An archive of e-Pearls can be found at NPub.org/epearls.

Does migraine leave your head spinning? Noninvasive treatment shows early promise

There may be some good news for people with vestibular migraine, a type of migraine that causes vertigo and dizziness with or without headache pain. A small, preliminary study suggests that non-invasive nerve stimulation may show promise as a treatment for vestibular migraine attacks, a condition for which there are currently no approved treatments. "There's a huge need for effective treatments for vestibular migraine attacks," said study author Shin C. Beh, MD, of University of Texas Southwestern Medical Center in Dallas and a member of the American Academy of Neurology. "People with vestibular migraine do not always have headaches and when they do, they are often less severe than in typical migraine, so the pain-relieving drugs used for typical migraine often are not effective. People can take drugs that suppress the vertigo or the nausea, but those drugs cause drowsiness and make it hard for people to go about their usual activities."
